Installation

1.1 Introduction

root	`C:\Custom Program Files\CAD Support Files\`
support	*root*`\Support`
user	*root*`\User Files`

1.2 Command Aliases (PGP)

1. Open the software's PGP file.
2. Copy of contents of the *user*`\user.pgp` to the bottom of the software's PGP file.
3. Close the file and reload it. The aliases at the bottom will override those at the top.

1.3 Paths

1. Open the options (command `options`).
2. Expand the `File`→`Support File Search Path`.
3. Add the *support*`\` directory.
4. Move the entry to the top so that anything in that directory is found first. See Figure 1.1.

1.4 Lisp

1. Find the software's *document*`.lsp`. Examples include:
   - `acaddoc.lsp`
   - `gcad2023doc.lsp`.
2. Copy it to the *support*`\` directory.
3. Edit the file to add the following the end (just before the file **(princ)** function):

   ```
   ; Added to support autoload of custom lisp files.
   (load "userdoc.lsp")
   ```
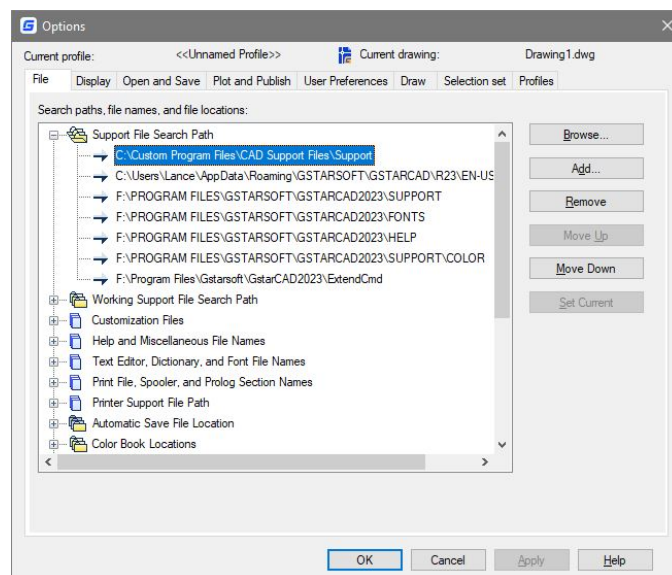

Figure 1.1: Add the user's support directory to the search path.
